Aims and scope

The purpose of this journal is to make available to a worldwide readership activities and research related to quality and safety in health care. The Journal publishes papers in all disciplines related to the quality of health care, including health services research, health care evaluation, health economics, utilization review; cost containment; and health teaching and research, as well as aspects of clinical research having to do with quality of care.

This peer-reviewed journal is truly interdisciplinary and includes contributions from representatives of all related health professions, such as doctors, nurses, quality assurance professionals, managers, politicians, social workers and therapists, as well as researchers from health-related backgrounds.

The Journal accepts original articles describing empirical studies and their results. Descriptions of the organization and process of health care quality evaluation and improvement are also published, as are editorials and letters dealing with the principles, ethics and philosophy of health care evaluation.

The Journal contains news of the International Society for Quality in Health Care (ISQua), including announcements of forthcoming courses, symposia and congresses. As the official organ of the Society, it serves as a forum for communication on Society activities.

SUBSCRIPTIONS

A subscription to the International Journal for Quality in Health Care comprises six issues. Our prices include Standard Air as postage outside of the UK. Airmail rates are available on request. International Journal for Quality in Health Care Advance Access contains papers that have been finalised, but have not yet been included within the issue. Advance Access is updated daily.
